

@arzumy DEV SETUP

#klxrb #4

- ① default installed apps
  - ② editors
  - ③ default gems
  - ④ team happiness
- 
- ```
graph LR; 3[default gems] --> Deployment[deployment]; 4[team happiness] --> Heroku[heroku specific]
```

default installed apps

before that! MBA

increased productivity  
8 GB is a lot, so far

# Knox

<https://agilebits.com/knox>

secure encrypted vaults

# Homebrew

<http://brew.sh>

installs the stuff you need

self manage `~/Library/LaunchAgents`

# iTerm 2

<http://www.iterm2.com>

split screens!

rbenv

<http://rbenv.org>

simpler

gitx

<https://github.com/brotherbard/gitx>

for times where you just want GUI

\* [Http://cczona.com/blog/2012/05/gitx-a-short-history](http://cczona.com/blog/2012/05/gitx-a-short-history)

# ssshuttle

<https://github.com/apenwarr/ssshuttle>

when working in captive network

brew install sssshuttle

editors

# RubyMine

<http://www.jetbrains.com/ruby>

easier to read code

# Sublime Text

[Http://www.sublimetext.com/](http://www.sublimetext.com/)

mostly for note taking :P

vim

<http://www.vim.org/>

for day to day work in console

default gems

zeus

<https://github.com/burke/zeus>

speed up Rails dev

# better\_errors

[https://github.com/charliesome/better\\_errors](https://github.com/charliesome/better_errors)

shell in browser!

letter\_opener

[https://github.com/ryanb/letter\\_opener](https://github.com/ryanb/letter_opener)

open mail in browser. so magical.

# annotate

[https://github.com/ctran/annotate\\_models](https://github.com/ctran/annotate_models)

so we don't have to refer to schema.rb

gems: deployment

`capistrano`

`capistrano-ext`

`capistrano-gitflow`

`capistrano_colors`

`asset_sync`

`should_precompile?` method

whenever

<https://github.com/javan/whenever>

cron is in the repo

gems: heroku specific

heroku toolbelt

heroku-san

heroku-api

# dotenv

<https://github.com/bkeepers/dotenv>

## ENV sanity

team happiness

# Skype & Sevabot

<https://github.com/opensourcehacker/sevabot>

your eggdrop for Skype

# Vagrantfile

<http://www.vagrantup.com/>

so we can play nice with Microsoft users

Hackpad.com  
PivotalTracker.com

thanks!

@arzumy
